

Simone Wang

Brooklyn, NY | simone.wang2002@gmail.com | +1 (347) 401 3978 | simone-wang.vercel.app | gitlab.com/Zoubie

Education

New York University, Tandon School of Engineering - M.S. in Computer Science Sep 2026 - Expected May 2028

University of Modena and Reggio Emilia - B.S. in Computer Science Graduated Oct 2024

Final Grade: 104/110 (US GPA 3.78/4.00). Coursework: Computer Architecture, Object-oriented Programming, Operating Systems, Protocols & Network, Languages & Compilers, Information Management, Full-Stack Engineering, Mobile Development, DevOps, Distributed Systems, Algorithms, Databases, Web Technologies

Technical Skills

Languages: C, C++, JavaScript, TypeScript, PHP, Python, Kotlin, SQL, HTML/CSS

Frontend: React, React Native, Angular, Blade, Adobe PDF Embed API, Google Maps & Geocoding APIs

Backend: Laravel, NestJS, Django, Filament, REST APIs, SOAP, MySQL, Stripe

Infra: Docker, AWS EC2, Nginx, GitLab CI/CD, Google Play Console, JSON-LD/SEO tooling

Professional Experience

Bonobo Srl | Web & Mobile Development Agency | Intern → Junior → Senior Modena, Italy | Nov 2022 - May 2026

StartClaims | *Insurance Claims Platform for Peritek Srl* | start-claims.peritek.eu Dec 2022 - May 2026

Senior Developer | *Angular + Laravel* | *API Integrations* | *GIS Systems* | ~986 hours

- Appointed technical lead for a merger integrating StartClaims with a 30-year legacy loss-adjuster system, consolidating two multi-million-euro platforms; worked weekly onsite with the company owners, deployed production updates independently, and shaped roadmap priorities from workflow observation and stakeholder interviews.
- Digitized the full claims-archiving workflow, replacing paper-based Word templates with a web-based Digital Desk where adjusters create and manage documents entirely in-platform; benchmarked and optimized queries and automated repetitive tasks, raising throughput so Peritek could accept more claim assignments.
- Built an interactive GIS claims map on the Google Maps API - added lat/long fields through migrations, bulk-geocoded all historical claims, and implemented marker clustering to help surveyors optimize site-visit routes; integrated the Deep Property and Generali APIs to enrich assessments and automate assignment ingestion.
- Used AI-assisted development (OpenAI Codex) for rapid prototyping and debugging while keeping manual code review and testing in the loop for production reliability.

DOCpack | *Cloud Platform for Packaging Design Teams* | docpack.it Apr 2025 - Sep 2025

Senior Developer | *React + NestJS + Adobe PDF Embed APIs* | ~280 hours (deadline-driven)

- Led development for the first two months, then supervised a junior developer while coordinating roadmap execution, bimonthly releases, and client testing cycles.
- Rebuilt the proposal viewer on the Adobe PDF Embed API with annotation tools, faster client-side loading, and richer markup controls; implemented the full job-reporting module (services, controllers, DTOs, migrations) so teams could submit photo reports through the API.
- Extended job search with customer-level filters wired through shared hooks, and reverse-engineered complex packaging workflows from the legacy system to translate required features faithfully.

DuePalleggi | *Sports Facility Reservation Platform (Web + Mobile)* | www.duepalleggi.it Oct 2023 - Jan 2025

Junior Developer | *React Native + Laravel* | ~320 hours

- Modernized an outdated mobile app to match the continuously evolving web platform: refreshed UI/UX, repaired broken discount logic, fixed booking failures, and resolved data-display inconsistencies.
- Delivered a major production release including indexed-club booking, ICS calendar attachments, refined mail systems, secure change-password and change-email flows, and faster club data generation; repaired edge cases such as bookings through inactive clubs and incorrect split-payment logic.
- Managed Android releases via Google Play Console and CI/CD web deployments through GitLab pipelines; mentored high-school interns through code review, task assignment, and early CS career guidance.

- Made this work the subject of my B.S. capstone thesis under Prof. Nicola Capodiecì (score 104/110), documenting 25+ features, 4 new REST APIs, and 50+ commits against production scale (5,525,000+ bookings; 125,000+ users; 1,200+ clubs; 3,600+ fields) and analyzing architectural decisions, mobile release management, and UI/UX consistency; presented to a commission including Prof. Marco Bertogna, a platform user.

Iscrizioni Coop Accento | *Regional Summer Camp Online Enrollment Portal* | iscrizioni.coopaccento.it Mar 2023 - Nov 2024

Junior Developer | *Laravel + Blade + SOAP* | ~392 hours

- Rebuilt an overwhelming registration form into a multi-step enrollment flow, improving clarity and ease of completion for parents.
- Delivered the Carta Docente voucher module, integrating SOAP services, and user-facing modals for teachers redeeming credits.
- Strengthened child-data validation (age mismatches, disability/allergy info, mandatory guardian information) and payment rules (early-bird, sibling discounts, IBAN checks); rebuilt director dashboards with year/center filters and historic-child toggles.
- Mentored interns while handling bug fixes and managing incoming feature requests through Trello.

Independent Projects

Yocigaci | *Trading Card Game E-Commerce Platform* | yocigaci.com Jun 2026 - Jul 2026

Sole Developer | *Laravel + React + Stripe*

- Designed, built, and operated a production storefront for a trading card shop in Carpi, Italy; live since launch with 28 orders (€3,600) in the first month.
- Shipped a multi-game catalog with faceted search and card-language filtering, a cart that survives reloads, and guest Stripe checkout supporting coupons, preorders, limited editions, selectable shipping, in-store pickup, and a public per-order tracking page.
- Hardened the Laravel REST API with server-side price recomputation, unguessable order numbers, transactional email to buyers and staff, and separate rate limits on auth, checkout, and tracking routes.
- Built a React control panel so the owner runs the business code-free - products, orders, coupons, shipping, homepage sections, banners, and curated mini-catalogs with drag-and-drop ordering, image uploads, and PDF receipts; handled SEO via JSON-LD, Googlebot prerendering, and a generated sitemap.

MeeTea&Poke | *Click & Collect Ordering Platform* | meetea-poke.com Jun 2026

Sole Developer | *Laravel + React + Kotlin*

- Sole developer of a takeaway-ordering system for a poke bowl and bubble tea shop in Italy; live and processing 320 orders (€7,200) in its first three months.
- Built a React 19 SPA with a multi-step order wizard (customizable poke bowls, bubble teas, snacks, drinks), a persistent cart, and pickup time-slot booking with per-slot capacity limits, backed by a Laravel REST API with server-side pricing, daily order numbering, and rate limiting; added a Filament admin panel for code-free menu and order management.
- Wrote a native Kotlin Android app that runs as a foreground service, polls for new orders, and auto-prints receipts on a Sunmi thermal printer; handled JSON-LD SEO, a WebP image pipeline, and Dockerized deployment behind nginx.

Awage Academy Web Platform | awage.com Feb 2026 - Present

Lead Developer | *React + Laravel* | *Collaborating with industry mentors from J.P. Morgan & Google*

- Built and independently deployed the first production prototype on AWS EC2, covering firewall configuration, Nginx setup, runtime dependencies, and DNS routing.
- Designed the initial architecture for goal tracking, student progress visibility, and mentor-facing features, including a calendar-based interface for application planning; communicated technical constraints and timelines directly to non-technical founders.

Personal & Soft Skills

Native Italian & Mandarin, fluent in English; client communication, mentorship, cross-functional collaboration, roadmap planning, independent prototyping, systems thinking, user-centric design.
